Jitao David Zhang

A Computational Biologist in Drug Discovery

F. Hoffmann-La Roche AG
4070 Basel, Switzerland
jitao_david.zhang@roche.com
jdzhang.me

Key facts

- 15+ years of experience in computational biology and drug discovery.
- Contributed to drug candidates reaching clinical trials and the market.
- Developed and transferred cutting-edge tools for translational science.
- Founded and led interdisciplinary research teams with strategic impact.
- Coordinated portfolio support and innovation across 60+ experts.
- Published 50+ peer-reviewed papers and filed multiple patents.
- Lecturer, mentor, and certified vocational trainer.
- Invited speaker and active contributor to scientific communities.
- Collaborates across Roche, academia, and industry to advance research.

Professional experience

2026– **Venia Docenti**, *University of Basel*, Basel, Switzerland
Habilitation and permission to teach computational biology and drug discovery at universities.

2022– **Expert scientist**, *F. Hoffmann-La Roche AG*, Basel, Switzerland
Supporting portfolio projects by developing and applying emerging technologies, validating and developing human-relevant model systems, and designing and implementing computational tools to empower translational research. Highlights include critical support for entry into human and clinical trials of several drug candidates including Zosurabalpin (currently tested in Phase 3 clinical trials) and Selnoflast (Phase 1), research on protein turnover and applications for target and modality selection, a systematic analysis of reasons for attrition of drug discovery and development projects, as well as development of computational and experimental workflows to profile efficacy and safety profiles of drug candidates using (phospho)proteomics and chemical probes.

2021– **Apprenticeship trainer and examination expert**, Switzerland
Training vocational apprentices specializing in computational sciences, application development, and platform development, and hosting qualification examinations.

2018– **Lecturer**, *University Basel of Basel*, Basel, Switzerland
Teaching two graduate- and post-graduate-level courses at Department of Mathematics and Computer Science, *Applied Mathematics and Informatics in Drug Discovery* (AMIDD) and *Computational and Mathematical Biology in Drug Discovery* (MCBDD), as well as contributing to other lecture series.

2018-2022 **Senior principal scientist**, *F. Hoffmann-La Roche AG*

Multiscale modelling of drug mechanism and safety, application of PACE (Pathway Annotated Chemical Ensemble, formerly known as SPARK) library for screening, development of machine-learning empowered toxicity screening assays. Highlights include the TeraTox assay, the identification of RepSox as a tool compound for ophthalmology, de-risking molecules in development, and informing key decisions for several projects.

2016-2018 **Principal scientist**, *F. Hoffmann-La Roche AG*

Developing the molecular phenotyping platform, developing the chemogenomic library SPARK, and supporting projects in the area of infectious diseases. Highlights include a pilot study of molecular phenotyping, identification of EGF uptake as an early readout for nephrotoxicity, and development of the BioQC software.

2013-2016 **Senior scientist**, *F. Hoffmann-La Roche AG*

Developing the molecular phenotyping platform, supporting Phase IV study of Oseltamivir/Tamiflu (the IRIS study), and applying multi-omics data analysis for disease modelling. Highlights include identification of the time-dependent critical role of TGF-beta signaling in breast cancer metastasis, and genomic analysis of the molecular neuropathology of tuberous sclerosis using a human stem cell model.

2011-2013 **Scientist**, *F. Hoffmann-La Roche AG*

Profiling compound efficacy and safety with omics methods, data mining, and machine learning. Highlights include the identification of a predictive gene network for drug safety by analyzing the TG-GATEs database, identification of the causal role of the JAK/STAT3 pathway in turning white adipose to brown, and informing decisions in multiple drug-discovery projects.

2008–2011 **Dr.rer.nat. Bioinformatics**, *German Cancer Research Center and Universität Heidelberg*, Heidelberg, Germany

Thesis: Computational and statistical approaches to study gene networks, supervised by Prof. Dr. Stefan Wiemann

2007 **Marie-Curie Fellow**, *European Institute of Bioinformatics*, Cambridge, UK

2006–2008 **M.Sc. Bioinformatics**, *Universität Heidelberg*, Germany

2006–2008 **Research associate**, *German Cancer Research Center*, Heidelberg, Germany

Bioinformatics algorithm and software development in the HUSAR Bioinformatics group

2005–2006 **Journalist and associate editor**, *Kicker China*, Beijing, China

Translating German articles on European football leagues and reporting on the German football league (German: *Bundesliga*) for Chinese readers

2002–2006 **B.Sc. Biology, hon.**, *Peking University*, Beijing, China

With a minor in German language and culture

Founding, leading, and serving teams

2024– Currently I assume the role of Portfolio Lead for cardiovascular metabolism, immunology, infectious disease, ophthalmology of the Predictive Modeling and Data Analytics team. I coordinate project support and innovation activities with input from more than 60 experts with a wide range of expertise in computational biology, biostatistics, translational modeling and simulation, disease modeling, and pharmacometrics. I work closely with other Portfolio Leads to present the team in communities and decision boards. Our teamwork has made critical impact on dozens of portfolio projects ranging from entry into portfolio to clinical trials and filing.

2024–2025 I served as a core team member of the PADCo (PBPK-ADME-DPL) community, organizing and facilitating meetings, exchanges, and activities of the community, which consists of more than 100 experts in modelling and simulation, drug absorption, distribution, metabolism, and excretion, translational drug metabolism-pharmacokinetics-pharmacodynamics, and clinical pharmacology.

2022–2024 I co-founded and lead a new research group within my organization, with 6 permanent positions, 2 postdocs, and interns. The team consists of computational scientists with training or working experience in toxicology, chemistry, biology, and statistics. I led the interviews and the on-boarding of new employees. I am responsible for integrating the team in the working environment, embedding the team in the process of drug discovery and development, and defining the team's vision, strategy, and scientific focus. The team has grown to become an indispensable unit in our organization.

2022–2023 I led a cross-functional team of about 30 people to improve the productivity and efficiency with regard to data, insight, and knowledge management. Stakeholders and team members gave positive feedback to the organization and the product of the team. The outcome has led to changes in how data and computational models are captured and used.

Supervision and mentoring

Postdoctoral researchers

Dr. Silvan Käser 2025- (co-supervision with Dr. Neil Parrott, Dr. Nenad Manevski, and Dr. Michael Reutlinger), predicting ADME/PK properties of emerging drug modalities

Dr. Davide Bassani 2023-2024 (co-supervision with Dr. Neil Parrott and Dr. Nenad Manevski), computational approaches to preclinical pharmacokinetic property prediction

Dr. Milad Adibi 2020-2022 (co-supervision with Dr. Ekaterina Breous-Nystrom), multiscale modeling of drug-induced liver toxicity, currently senior computational biologist at University of Zurich

Dr. Simon Gutbier 2018-2020 (co-supervision with Dr. Christoph Patsch and Dr. Markus Britschgi), immune pathway characterization with tool-compound screening for Parkinson's Disease, currently principal scientist at Roche

Student interns

Alessio D'Addio 2025 internship working on knowledge and data integration for target and modality selection

Alexandra Valeanu 2023, internship working on inferring causal kinases with phosphoproteomics data

Simon Crouzet 2022, internship working on predicting protein-ligand interaction with graph neural networks, currently PhD student in Dal Peraro's group at EPFL

Anja Lieberherr 2022-2023 (co-supervision with Prof. Niko Beerenwinkel at ETH), master thesis on applying graph neural networks in drug discovery, currently junior technology consultant at BearingPoint, Zürich

Sarah Morillo	2021-2022, internship working on proteomics data and protein half life, currently PhD student in Erik van Nimwegen's group at Biozentrum, University of Basel
Andreea Ciuprina	2020 (co-supervision with Prof. Niko Beerenwinkel), internship and master thesis on computational inference of immune-cell contribution to drug-induced liver toxicity, currently data engineer and scientist at Endress+Hauser Flowtec
Rudolf Biczok	2018-2019 (co-supervision with Prof. Alexandros Stamatakis, KIT), internship and master thesis on building a gene-expression database and evaluating gene-set comparison metrics, currently full-stack Java architect and Azure cloud specialist at Bank for International Settlements (BIS)
Moaraj Hasan	2017-2018, internship working on automating gene-expression data analysis
Tao Fang	2017-2018 (co-supervision with Prof. Mark Robinson, UZH), internship and master thesis on histopathology prediction with deep neural networks, currently postdoctoral fellow in von Mering group at University of Zurich
Gregor Sturm	2016-2017, internship working on gene signatures and the BioQC software, currently clinical bioinformatics scientist, Boehringer Ingelheim

Vocational apprentices specializing in computer sciences

Rigani Jegath-eeswaran	2025-2026, currently working with Roche
David Weber	2025-2026, currently working with Roche
Nina Lareida	2024-2025, currently part-time working at Roche
Niklas Trapp	2024-2025, currently working with Roche
Giulia Ferraina	2023-2024, currently part-time working at Roche and studying computer science at FHNW
Jannick Lippuner	2023-2024, currently working with Roche
Yannik Benndorf	2022-2023, currently studying computer sciences in TU München
Paul Geser	2022-2023, currently studying AI in Hochschule Luzern (HSLU). I am Mr. Geser's Roche mentor as part of the *Study With Roche* offer that sponsors the study.
Lukas Rinke	2021-2022, currently studying Data Sciences at FHNW. I am Mr. Rinke's Roche mentor as part of the *Study With Roche* offer that sponsors the study.
Leonardo Seminatore	2021-2022, currently bachelor of science in geomatics, FHNW

Outreaching

Teaching activities

2026–	European Center of Pharmaceutical Medicines (ECPM), Faculty of Medicine, University of Basel, teaching in the module *From Non-Clinical Testing to First-in-Human*

2020–2023 Courses on causal inference and computational toxicology for the PSI (Statisticians in the Pharmaceutical Industry) community, once a year

2019– Lecture series *Mathematical and Computational Biology in Drug Discovery* at the University of Basel, 2 hours per week in the spring semester

2018– Lecture series *Introduction to Applied Mathematics and Informatics In Drug Discovery* at the University of Basel, 2 hours per week in the fall semester

2018– Lecture series *From Novel Targets To Novel Therapeutic Modalities*, Master Programme Drug Sciences, University of Basel, one lecture per semester

2012– Leading company-internal courses, seminars and workshops about computational biology in drug discovery, on average 2 hours per week

Selected invited talks

2025 *Defining Human Dosing for Covalent Inhibitors with Translational PK/PD and Protein Turnover Data*, co-presenting with Neil John Parrot, DMDG Meeting *Focusing on Targeted Covalent Drugs: how to best identify and develop Target Covalent Inhibitors*, Basel, Switzerland

2024 *Towards intelligent benefit-risk assessment of drug candidates*, Swiss Society of Pharmacology and Toxicology (SSPT) Spring Meeting 2024, Bern, Switzerland

2023 *Finding hope in a hopeless time - How Predictive Modeling and Data Analytics shifts our perspectives about antimicrobial discovery*, workshop on the promise of artificial intelligence to antibacterial drug discovery, 7th AMR Conference, Basel, Switzerland

2022 *Towards causal modelling of drug-induced toxicity for preclinical to clinical translation*, the Third In Silico Toxicology meeting, online

2021 *Optimization of the TeraTox assay for preclinical teratogenicity assessment*, co-presentation with Manuela Jaklin, OpenTox Virtual Conference, online

2019 *Bioinformatics and exploratory data analysis in drug discovery: an industrial perspective*, ISMB/ECCB, Basel, Switzerland

2018 *Mathematics in drug discovery: a practitioner's view*, Perlen-Kolloquium, University of Basel, Switzerland

Voluntary engagement in education

2025– Elected member of School Council (*Schulrat*) of the Wasserstelzen primary school, Riehen, Basel, Switzerland

2023– Invited member of selection committees for tenure track positions in universities

2022– Co-organizer of Roche PMDA (Predictive Modeling and Data Analytics) Summer Schools for PhD students, a one-week event taking place annually

2021– Member of Parent's Council (*Elternrat*) of the Erlensträsschen primary school, Riehen, Basel, Switzerland

2021– Certified vocational trainer (*Lehrmeister*) and examination expert for vocational apprenticeship in computer sciences

2020– Certified Software and Data Carpentry instructor, hosting company internal courses on programming and data analysis

2014– Invited reviewer for research proposals by national funding agencies

2012– Reviewer of scientific manuscripts for journals including *Bioinformatics*, *PLOS Comp. Biol.*, *NAR Genom. and Bioinform.*, *etc.*

Teaching activities

2020–	Courses on causal inference and computational toxicology for the PSI (Statisticians in the Pharmaceutical Industry) community, once a year
2019–	Lecture series *Mathematical and Computational Biology in Drug Discovery* at the University of Basel, 2 hours per week in the spring semester
2018–	Lecture series *Introduction to Applied Mathematics and Informatics in Drug Discovery* at the University of Basel, 2 hours per week in the fall semester
2018–	Lecture series *From Novel Targets To Novel Therapeutic Modalities*, Master Programme Drug Sciences, University of Basel, one lecture per semester
2012–	Leading company-internal courses, seminars and workshops about computational biology in drug discovery, on average 2 hours per week

Outreach activities

Selected invited talks

2025	*Oneness of Target and Modality Selection in Drug Discovery*, Institute of Molecular Systems Biology, ETH Zürich
2024	*Towards intelligent benefit-risk assessment of drug candidates*, Swiss Society of Pharmacology and Toxicology (SSPT) Spring Meeting 2024, Bern, Switzerland
2023	*Finding hope in a hopeless time – How Predictive Modeling and Data Analytics shifts our perspectives about antimicrobial discovery*, workshop on the promise of artificial intelligence to antibacterial drug discovery, 7th AMR Conference, Basel, Switzerland
2022	*Towards causal modelling of drug-induced toxicity for preclinical to clinical translation*, the Third In Silico Toxicology meeting, online
2021	*Optimization of the TeraTox assay for preclinical teratogenicity assessment*, co-presentation with Manuela Jaklin, OpenTox Virtual Conference, online

2019 *Bioinformatics and exploratory data analysis in drug discovery: an industrial perspective*, ISMB/ECCB, Basel, Switzerland

2018 *Mathematics in drug discovery: a practitioner's view*, Perlen-Kolloquium, University of Basel, Switzerland

Engagement in academic and vocational-training activities

2023– Invited member of selection committees for tenure track positions in universities

2022– Co-organizer of Roche PMDA (Predictive Modeling and Data Analytics) Summer Schools for PhD students, a one-week event taking place annually

2021– Certified vocational trainer (German: *Lehrmeister*) and exam expert for vocational apprenticeship in computer sciences

2020– Certified Software and Data Carpentry instructor, hosting company internal courses on programming and data analysis

2014– Invited reviewer for research proposals by national funding agencies

2012– Reviewer of scientific manuscripts for journals including *Bioinformatics*, *PLOS Comp. Biol.*, *NAR Genom. and Bioinform.*, *etc.*

Supervisions

Postdoctoral researchers

Dr. Silvan Käser — 2025- (co-supervision with Dr. Neil Parrott, Dr. Nenad Manevski, Dr. Michael Reutlinger), ADME/PK prediction for macrocyclic peptides, targeted degraders, and other beyond-Rule-of-five compounds

Dr. Davide Bassani — 2023-2025 (co-supervision with Dr. Neil Parrott and Dr. Nenad Manevski), pharmacokinetic and ADME property prediction

Dr. Milad Adibi — 2020-2022 (co-supervision with Dr. Ekaterina Breous-Nystrom), multiscale modeling of drug-induced liver toxicity, currently senior computational biologist at University of Zurich

Dr. Simon Gutbier — 2018-2020 (co-supervision with Dr. Christoph Patsch and Dr. Markus Britschgi), immune pathway characterization with tool-compound screening for Parkinson's Disease, currently principal scientist at Roche

Master students and interns

Alessio D'Addio — 2025-2026 (co-supervision with Dr. Bernd Kuhn and Dr. Torsten Schindler), internship working on Covalent Target Index

Alexandra Valeanu — 2023, internship working on inferring causal kinases with phosphoproteomics data

Simon Crouzet — 2022, internship working on predicting protein-ligand interaction with graph neural networks, currently PhD student in Dal Peraro's group at EPFL

Anja Lieberherr — 2022-2023 (co-supervision with Prof. Niko Beerenwinkel at ETH), master thesis on applying graph neural networks in drug discovery, currently junior technology consultant at BearingPoint, Zürich

Sarah Morillo — 2021-2022, internship working on proteomics data and protein half life, currently PhD student in Erik van Nimwegen's group at Biozentrum, University of Basel

Andreea Ciuprina	2020 (co-supervision with Prof. Niko Beerenwinkel), internship and master thesis on computational inference of immune-cell contribution to drug-induced liver toxicity, currently data engineer and scientist at Endress+Hauser Flowtec
Rudolf Biczok	2018-2019 (co-supervision with Prof. Alexandros Stamatakis, KIT), internship and master thesis on building a gene-expression database and evaluating gene-set comparison metrics, currently full-stack Java architect and Azure cloud specialist at Bank for International Settlements (BIS)
Moaraj Hasan	2017-2018, internship working on automating gene-expression data analysis
Tao Fang	2017-2018 (co-supervision with Prof. Mark Robinson, UZH), internship and master thesis on histopathology prediction with deep neural networks, currently postdoctoral fellow in von Mering group at University of Zurich
Gregor Sturm	2016-2017, internship working on gene signatures and the BioQC software, currently clinical bioinformatics scientist, Boehringer Ingelheim

Vocational apprentices specializing in computer sciences

Giulia Ferraina	2023-2024, currently co-developing a software system for drug discovery research
Jannick Lippuner	2023-2024, currently co-developing a software system for drug discovery research
Yannik Benndorf	2022-2023, currently bachelor of computer sciences in TU München
Paul Geser	2022-2023, currently local IT manager volunteer at MAF Madagascar
Leonardo Seminatore	2021-2022, currently bachelor of science in geomatics, FHNW

Experience in establishing and leading teams

2022–2024	I co-founded and led a new research group within my organization, with six permanent positions, two postdocs, and interns. The team consists of computational scientists with training or working experience in toxicology, chemistry, biology, and statistics. I led the interviews and the on-boarding of new employees. I am responsible for integrating the team in the working environment, embedding the team in the process of drug discovery and development, and defining the team's vision, strategy, and scientific focus.
2022–2023	I led a cross-functional team of about 30 people to improve the productivity and efficiency with regard to data, insight, and knowledge management. Stakeholders and team members gave positive feedback on the team's organization and output. The outcome has led to changes in how data and computational models are captured and used.
